UTTAR PRADESH 2026

Figures as of 10 April 2026, when the final roll was published.

Overview

1. Uttar Pradesh's draft roll left off 2.89 crore names, 18.7 of every 100 electors on the roll of 27 October 2025.

2. Women were 53.6% of the names left off and 46.8% of the roll before the revision. 21.5 of every 100 women on the roll were left off, against 16.3 of every 100 men, by the Chief Electoral Officer's rounded figures.

3. Urban areas lost 28.1 of every 100 electors and rural areas 15.3, by the Chief Electoral Officer's figures as the press reported them.

4. Lucknow left off 30.0 of every 100 electors, the most of the 75 districts, and 17 districts left off 20 or more. Lalitpur left off the fewest, 10.0.

5. No count by constituency was published. If each district's names left off are shared out over its seats by their electors, the share is larger than the 2022 winning margin in 377 of the 403 seats. This estimates how many seats the names left off could have decided. It cannot say which seats, or that any result changed.

6. After the draft, notices went to 3.26 crore electors, 26.0 of every 100 on it, and 3.5 lakh were deleted for not answering one.

Where the revision in Uttar Pradesh stands on 3 November 2026

The final roll was published on 10 April 2026.

An elector who is not on the final roll can still apply on Form 6 at any time under continuous updation.

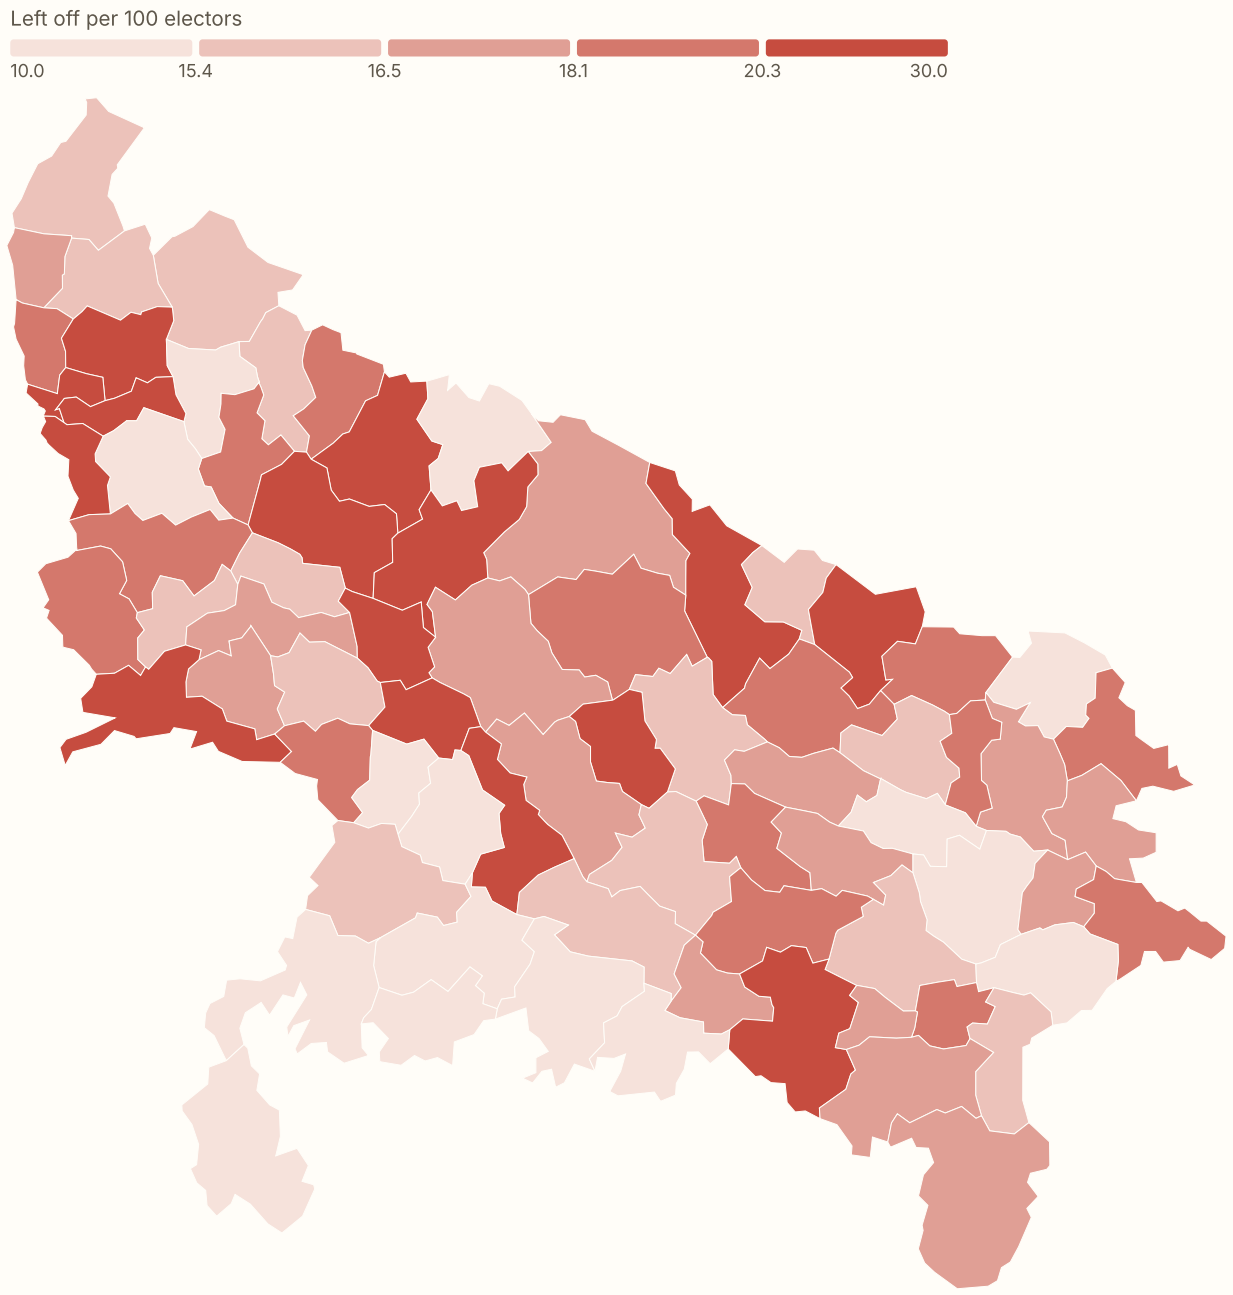

The Commission's letter of 15 October 2026 ordered a special summary revision of the roll in Uttar Pradesh, with 1 January 2027 as the qualifying date. It set the draft roll for 12 November 2026, claims and objections until 11 December 2026, decisions on them by 28 December 2026, and the final roll for 4 January 2027.

What to do now in Uttar Pradesh · How to ask to be added on Form 6, or to correct an entry on Form 8

Where these dates come from The final roll, as published · ECI letter No. 23/2026-ERS of 15.10.2026 to the Chief Electoral Officers of 17 States/UTs, as published by CEO Kerala

Find a district

Type a district's name and its figures appear below with a link you can send. The revision's figures were published by district only, so this page has no assembly constituencies to find.

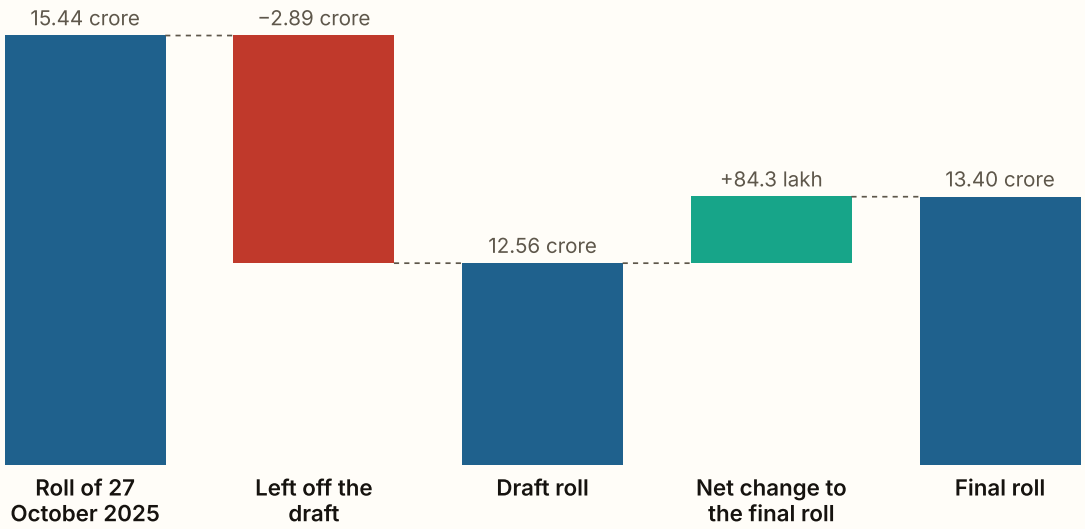

Each district is shaded by the names left off its draft roll for every 100 electors on its roll of 27 October 2025, the roll the revision started from. Tap a district for its figures. District boundaries drawn from DataMeet's assembly constituency map (CC BY 2.5 India), with each constituency placed in its district as the 2022 election results list it.

The roll, step by step

The revision started from the roll of 27 October 2025. The draft roll is the list published once the enumeration forms were collected, and a name whose form did not come back was left off it. Names were then added and deleted on claims and objections, and the

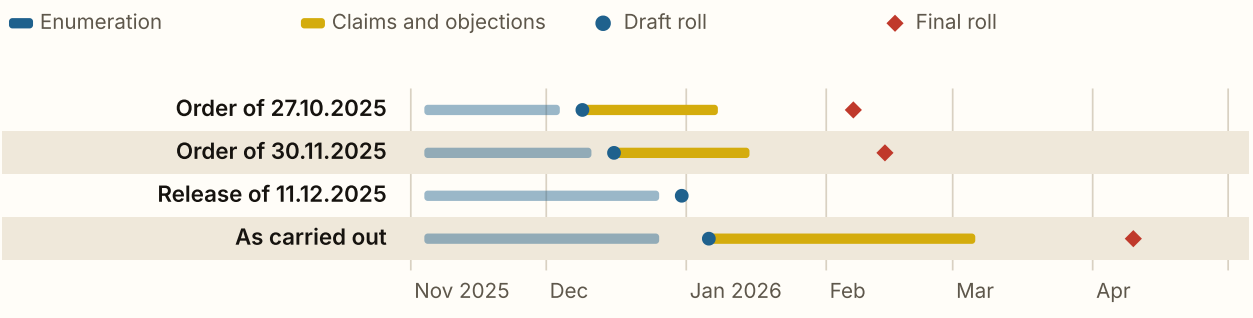

result is the final roll of 10 April 2026. The chart follows the state's roll through those steps. The bars start above zero so that the changes can be seen.

The draft roll left off 2.89 crore names, 18.7 of every 100 electors. The final roll was 84.3 lakh larger than the draft, 29.2% of what the draft left off. That rise is the names added, new voters among them, less the names deleted. A further 8.2 lakh were deleted after the draft, as reported in the press.

When it happened

The Commission set Uttar Pradesh's dates three times, and the revision then ran later than any of them. Each line is one schedule, from the first house visits to the final roll. The last line is the revision as it was carried out, from the Chief Electoral Officer's own account of 13 April 2026.

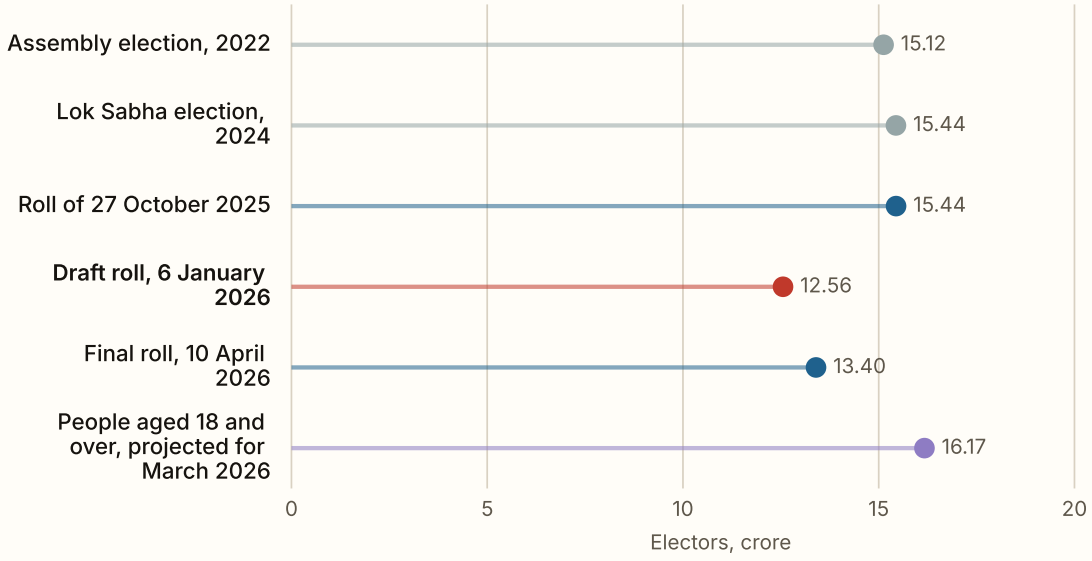

Hover over, tap or tab to a row for its dates.

> **The final roll came out on 10 April 2026, 62 days after the date in the Commission's order of 27 October 2025.** The draft was published on 6 January 2026, 28 days later than that order set. Claims ran to 6 March 2026, and notices were heard until 27 March 2026.

Every state's dates, as they were set and as they were moved, are drawn side by side on How the revision was run.

The draft against earlier rolls

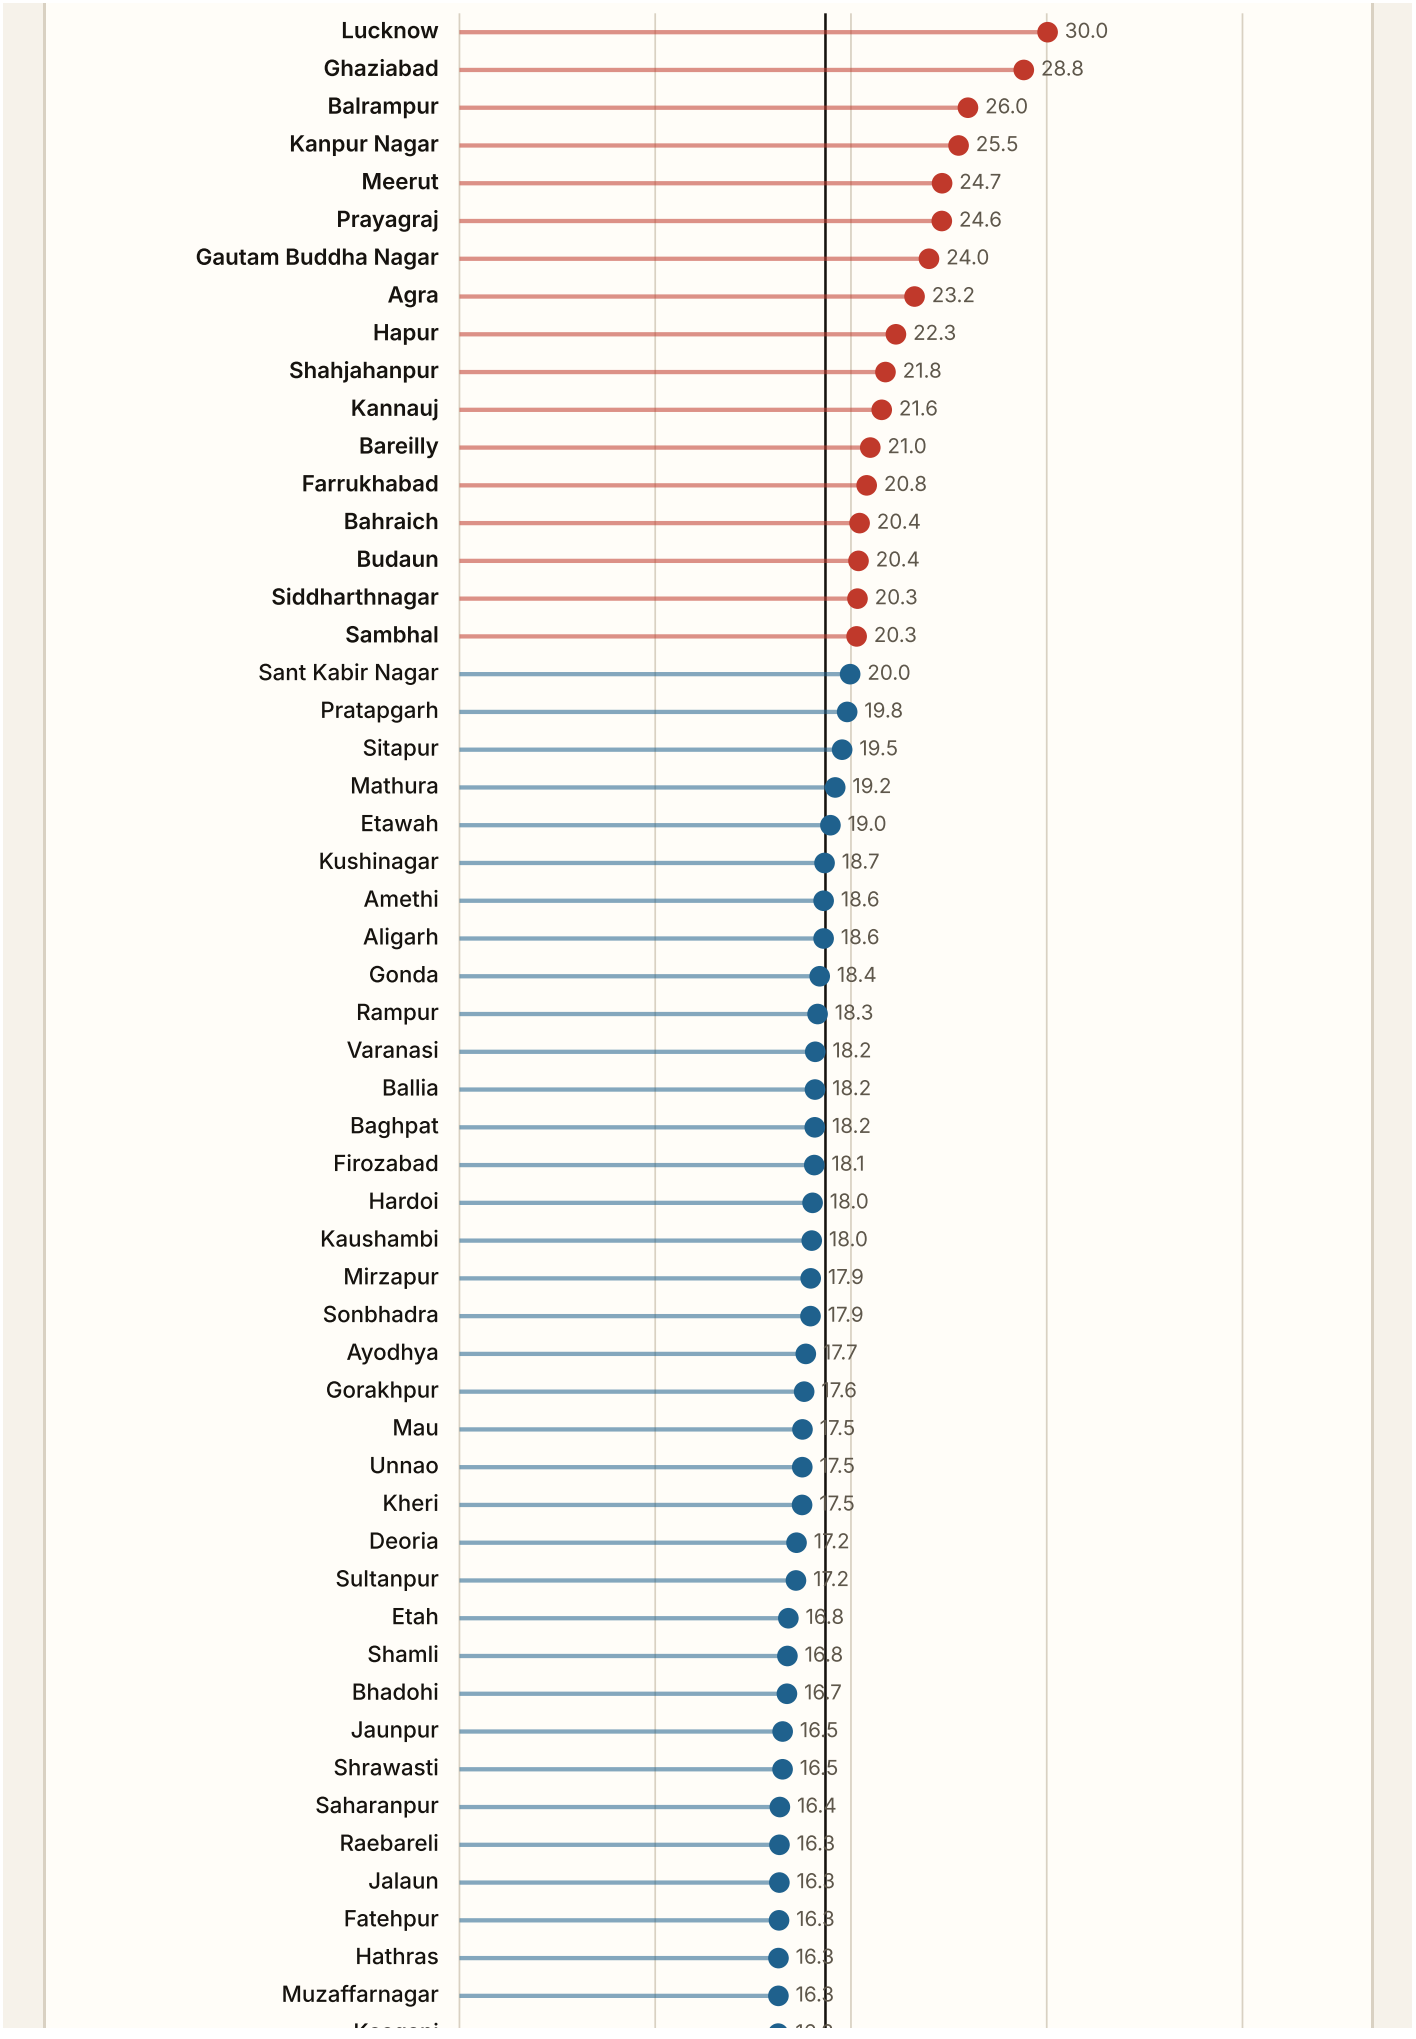

The size of each roll for every 100 people aged 18 and over in Uttar Pradesh, as projected for 1 March 2026 by the National Commission on Population. The projection counts residents, so people who live in another state and vote here are not in it.

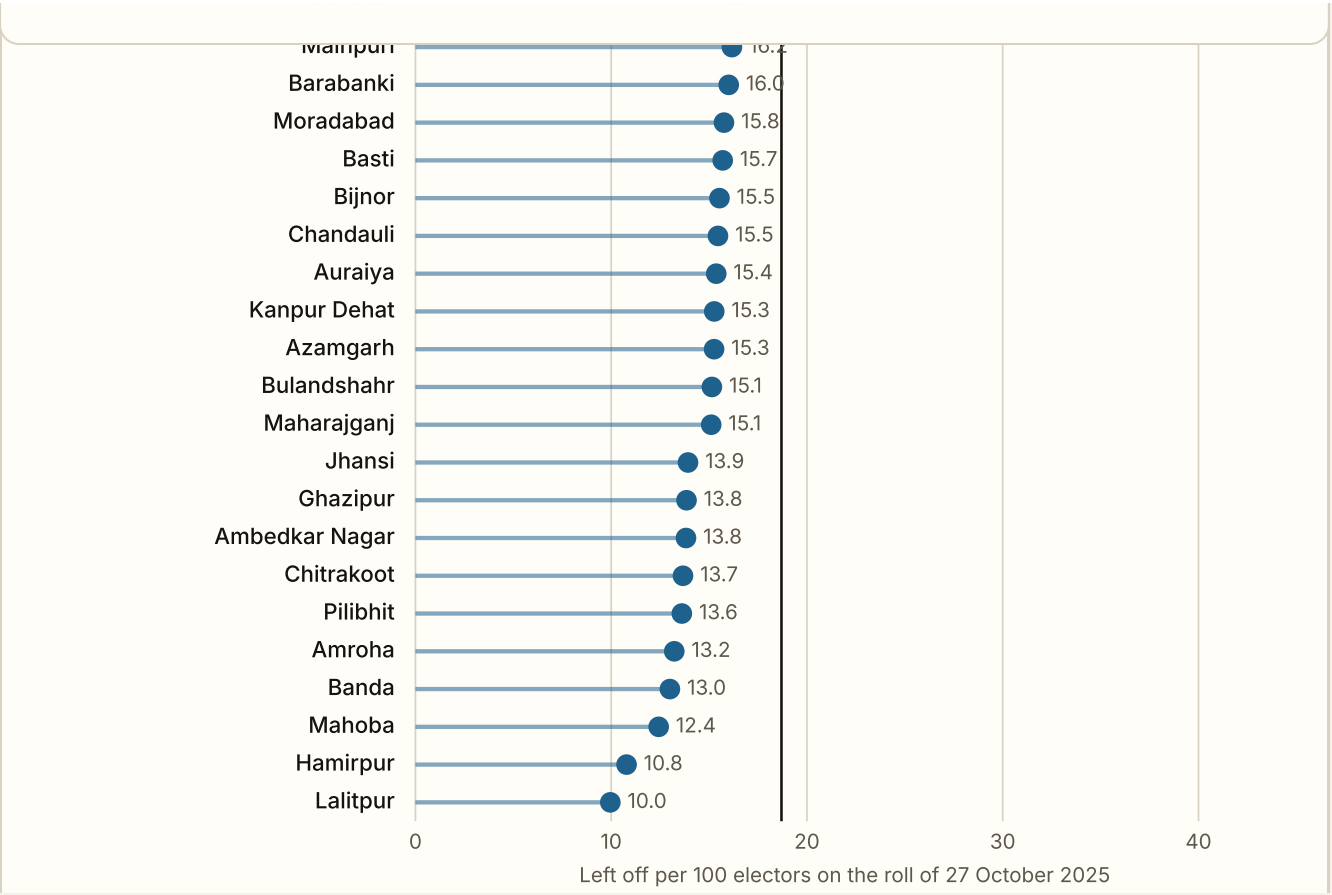

> **The final roll holds 1.73 crore fewer electors than the roll of the 2022 Assembly election, and 2.04 crore fewer than the roll of the 2024 Lok Sabha election.** The roll the revision started from held 95.5 electors for every 100 people of voting age. The draft held 77.7 and the final roll 82.9. The population figure is a projection, and if it is right, about 2.77 crore adults living in the state are on no roll here, some of them because they are registered in another state or are not citizens.

Per 100 electors, by district

The names left off each district's draft roll, for every 100 electors on its roll of 27 October 2025. Counting per 100 electors puts large and small districts on one scale. A rate of 20 per 100 means one elector in five was left off. The district figures are from the table of the Chief Electoral Officer (CEO), who keeps the state's rolls for the Election Commission, as published in the press.

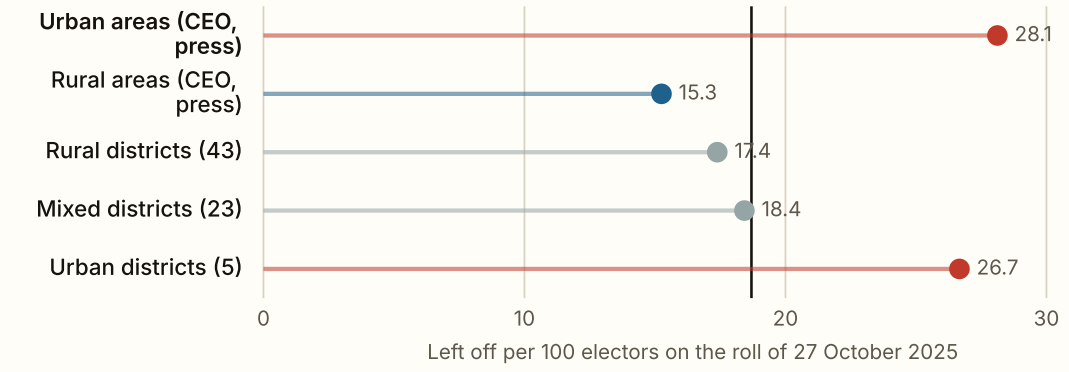

Lucknow 30.0

Fatehpur 16.3
Hathras 16.3
Muzaffarnagar 16.3

Lucknow left off 30.0 of every 100 electors, 12.0 lakh names, the most of any district. Ghaziabad, Balrampur, Kanpur Nagar and Meerut come next. 17 of the 75 districts left off 20 or more per 100, against 18.7 for the state. Lalitpur left off the fewest, 10.0. The upright line on the chart marks the rate for the state as a whole.

Towns and villages

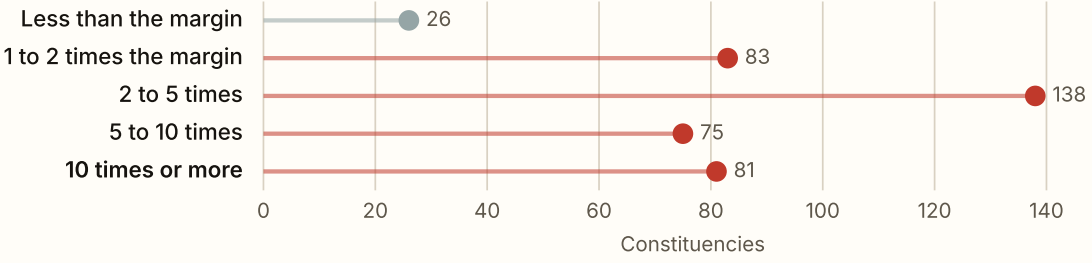

The Chief Electoral Officer gave the press the roll before the revision and the draft for the state's urban and rural areas, each rounded to the lakh. They are set beside each other here, with the same comparison by district, where a district counts as urban when more than half its people lived in towns at the 2011 Census.

Urban areas lost 28.1 names for every 100 electors and rural areas 15.3. Urban areas held 26.9% of the roll and 40.5% of the names left off, 1.17 crore of them. The five districts where most people lived in towns in 2011 lost 26.7 per 100 and the 43 most rural 17.4. The Hindustan Times printed the rural fall as 1.27 crore, but its own two rural rolls, and the 15.23% it gives, put it at 1.72 crore, which is the figure used here.

Against the 2022 winning margins

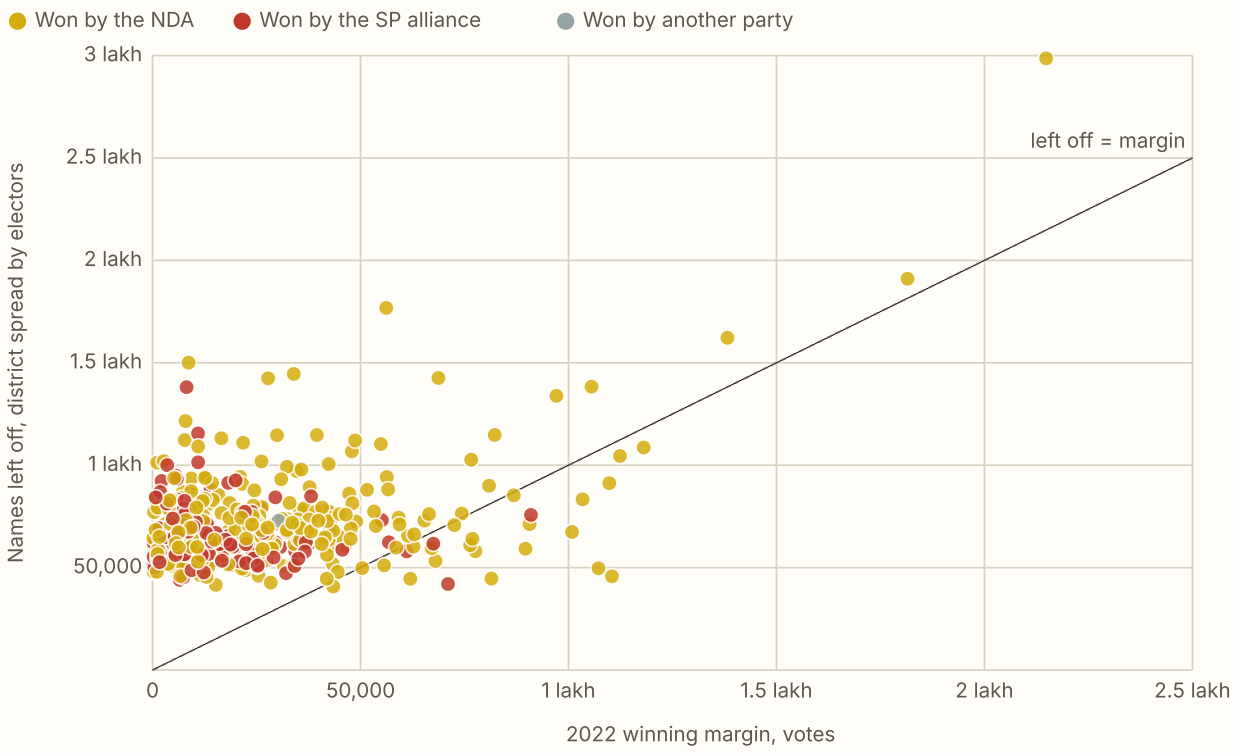

No figure by assembly constituency has been published. So each district's names left off are spread over its constituencies in proportion to their electors in the 2022 Assembly election, and set against each seat's 2022 winning margin. That shows how many seats the names left off were large enough to decide. It cannot show which seats, because the real count in a constituency can sit well above or below its district's rate, and it cannot show that any result would have changed. Each dot is one constituency. A dot above the line had more names left off on this spread than its winning margin.

On this spread, the names left off were larger than the 2022 winning margin in 377 of the 403 constituencies. In the typical seat the margin was 19,684 votes and the spread puts 66,644 names left off. All 53 seats won by fewer than 5,000

> votes are among them. Larger than the margin means the names left off were large enough to decide the seat. It does not mean they did, since the people left off would not all have voted, nor all for one side. Spreading the state's total over the seats without the district split, as the All India margins page does, gives 381.

The same seats one by one. Each dot is a constituency, placed by its 2022 margin and by the names left off on the spread.

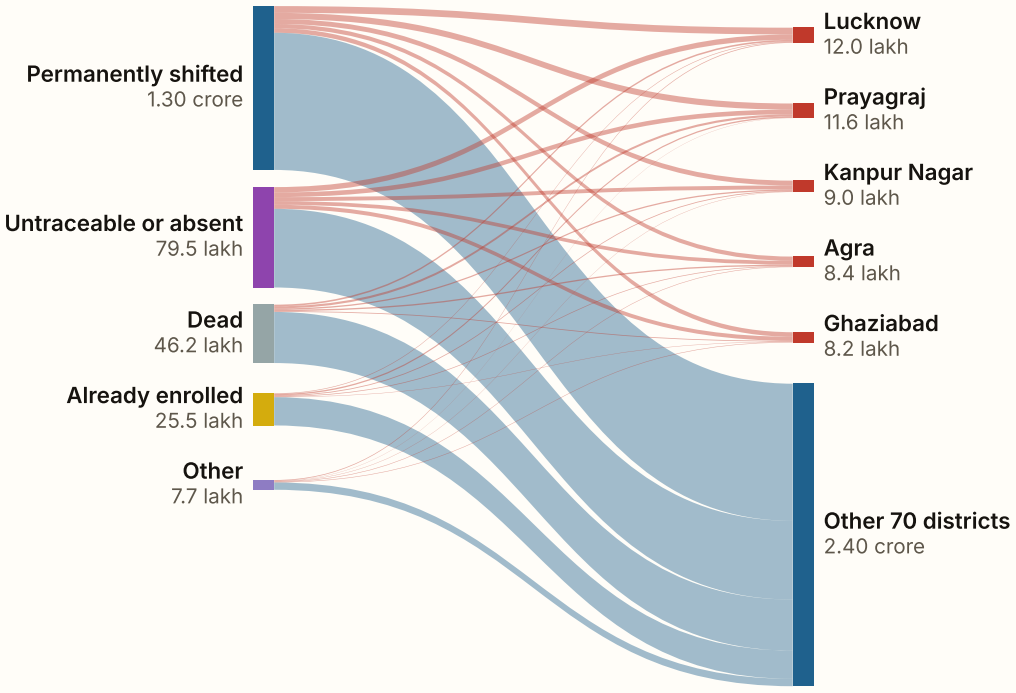

WON IN 2022 BY ▾	SEATS	LEFT OFF ABOVE THE MARGIN	THEIR DISTRICTS' RATE PER 100
SP alliance	125	121	17.7
NDA	273	251	19.1
Another party	5	5	18.5

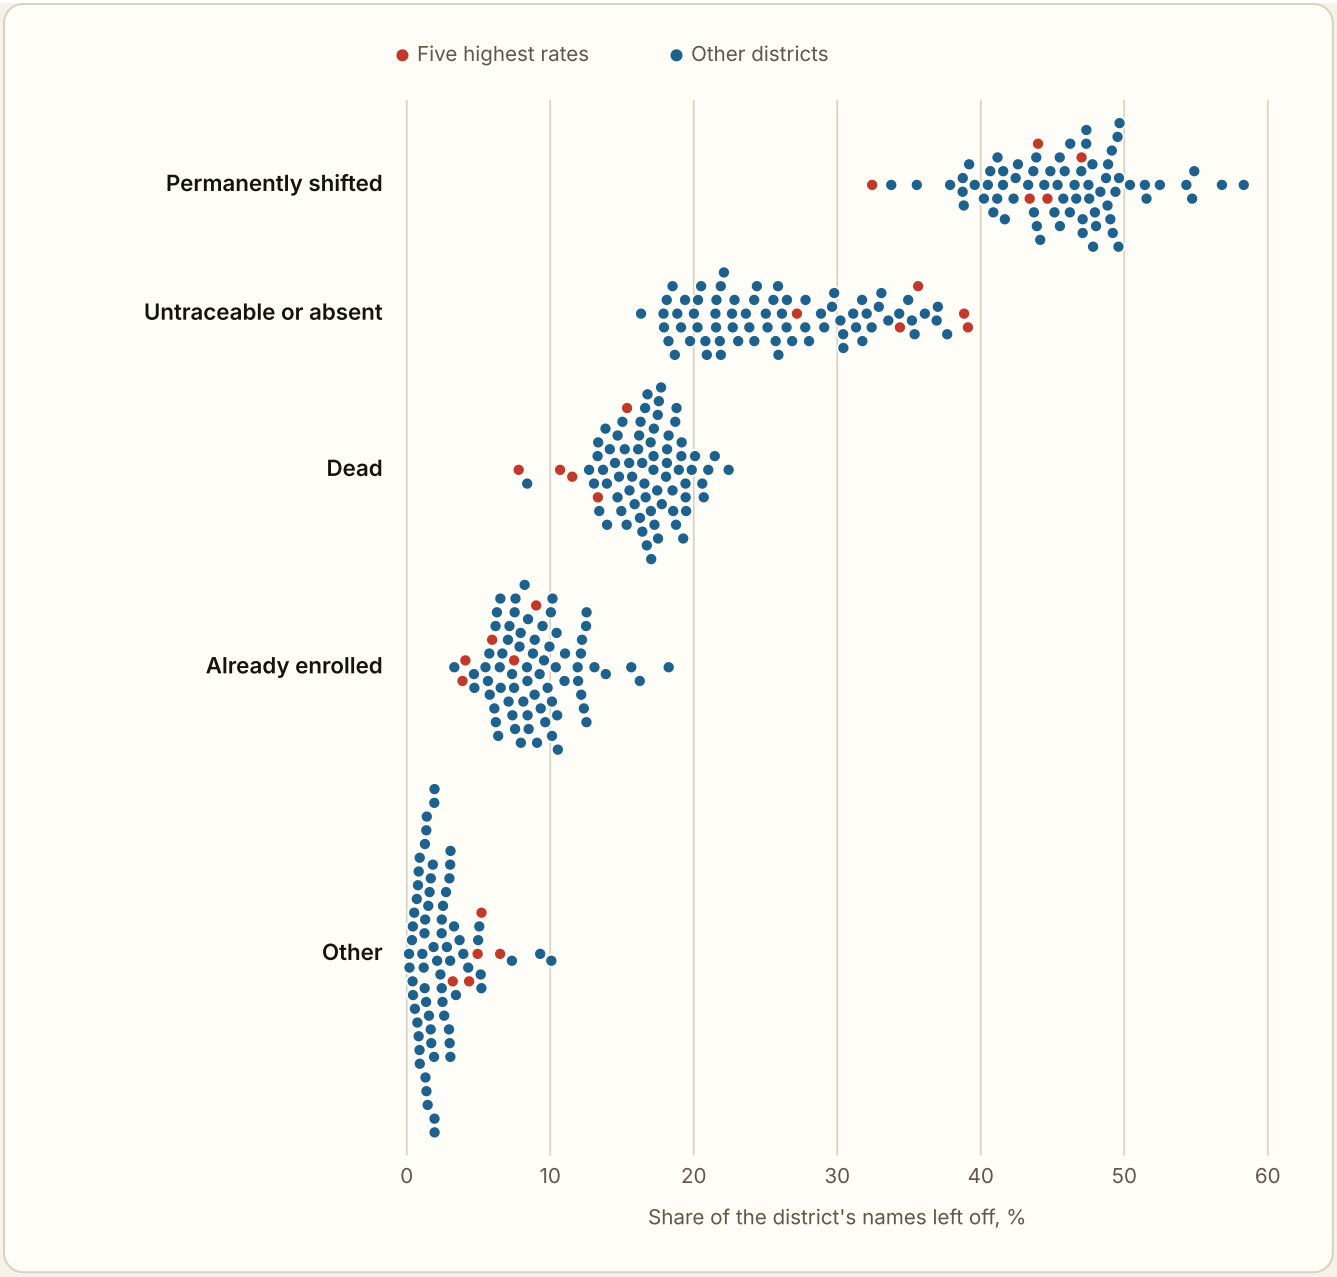

The 2022 results are the Election Commission's statistical report. The NDA is the BJP, Apna Dal (Soneylal) and the NISHAD party, and the SP's alliance is the SP, the RLD and the SBSP, as they contested in 2022. Every constituency's spread figure is in the download at the foot of this page.

The reasons

Every name left off the draft has one of five reasons entered against it. The chart runs from the five reasons on the left to the districts on the right, with the five districts that left off the most names shown on their own and every other district together. A reason is what the officer wrote down, and nobody checked it.

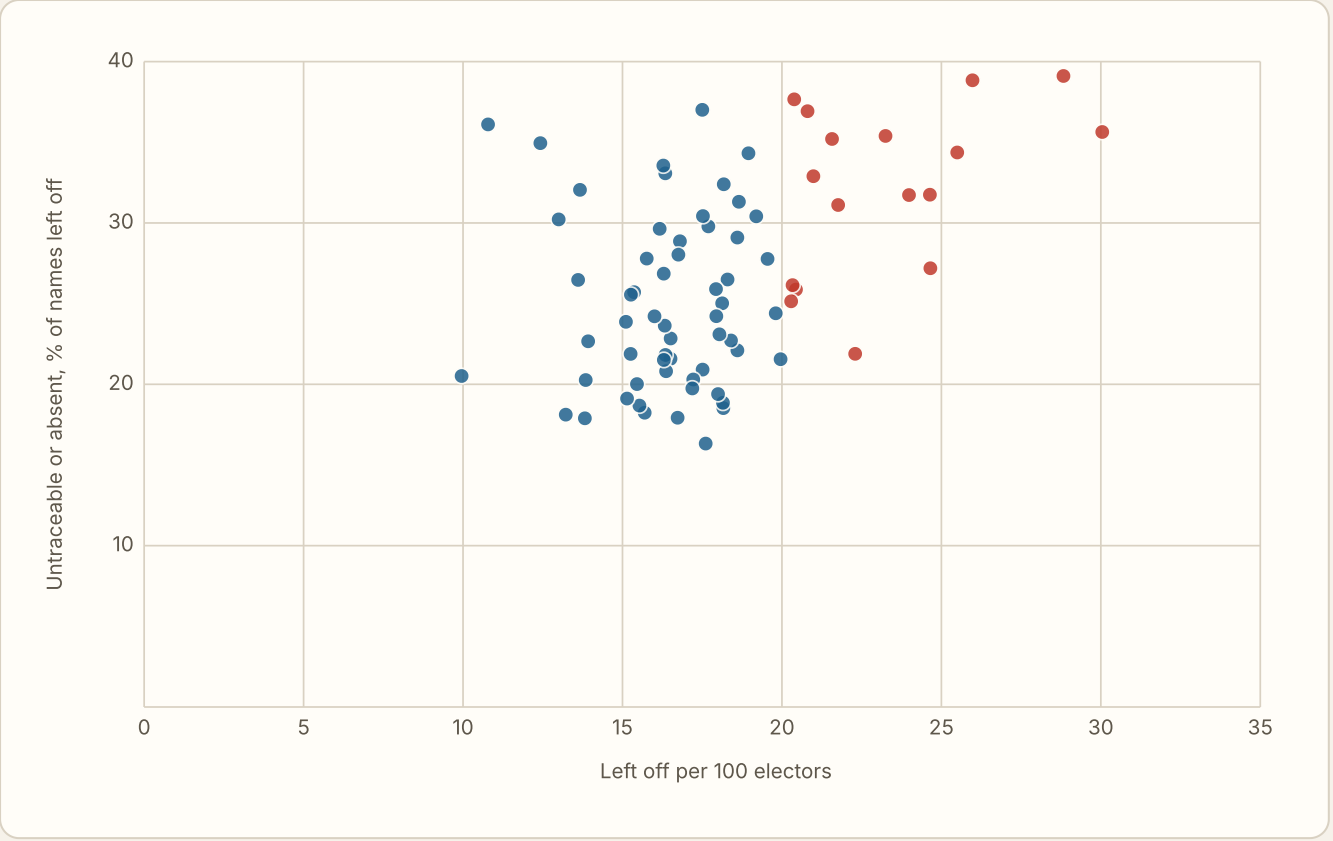

The same reasons district by district. Each dot is one district, placed at the share of its names left off that were entered under that reason. The five districts that left off the most per 100 electors are in red. Hover or tap a dot for its name.

Across the state, 44.9% of the names left off were entered as permanently shifted, 27.5% as untraceable or absent and 16.0% as dead. 8.8% were entered as already enrolled elsewhere. The share entered as untraceable or absent is highest in Ghaziabad, 39.1%, and the share entered as dead in Gonda, 22.4%.

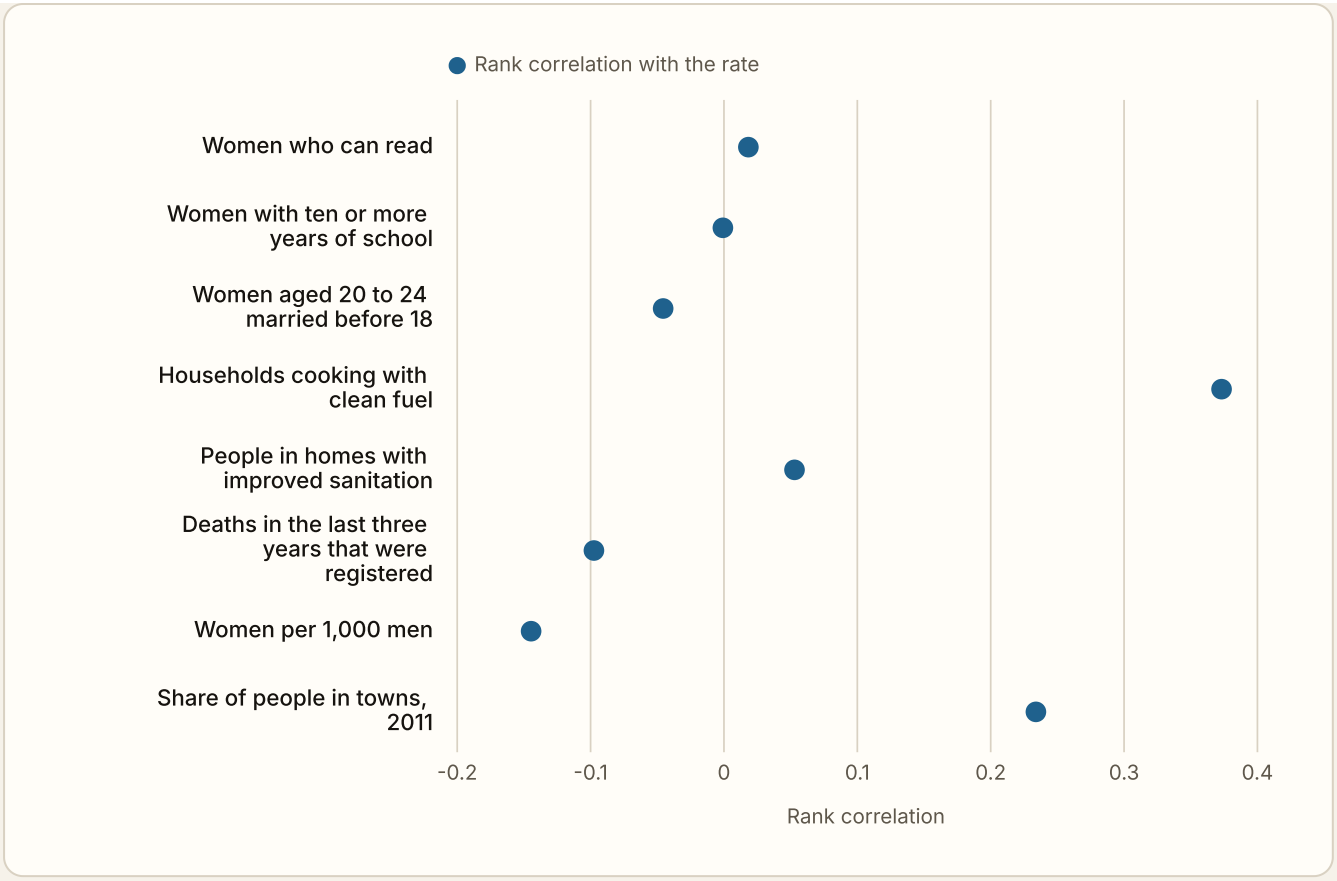

Districts that left off more names entered more of them as untraceable or absent. Each dot is one district, placed by its rate and by the share of its names left off that were entered as untraceable or absent.

The rank correlation between a district's rate and the share it entered as untraceable or absent is 0.41. With the share entered as dead it is -0.38, and with the share entered as permanently shifted -0.42. The districts that lost the most names lost them mostly as people the officers could not find, the least checkable of the five reasons.

District circumstances

A rank correlation between each district's rate and a circumstance of the district, from the National Family Health Survey of 2019-21 and the 2011 Census. It runs from -1 to 1, and 0 means no relationship. With 75 districts, a correlation has to be larger than about 0.23 either way before it is clear of chance. These circumstances move together, so none of them can be named as a cause.

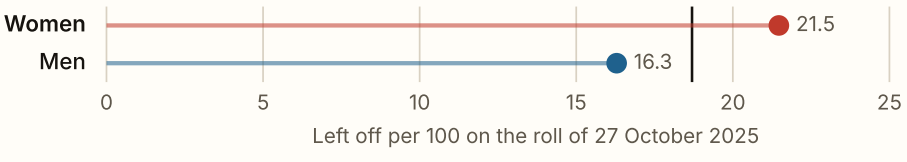

> **households cooking with clean fuel (0.37) is the only circumstance clear of chance.** Schooling, early marriage, sanitation, registered deaths and the sex ratio show no relationship with the rate. Clean cooking fuel is most common in the towns, and the share of people in towns, 0.23 across 71 districts of 2011, sits just short of the line. The rate follows the towns more than anything about schooling or women's lives.

The same comparison for eleven other states is on District factors, and the urban comparison on Urban and rural.

Women

The Chief Electoral Officer gave the press the names left off by sex, rounded to the lakh. Adding them to the draft roll by sex gives the roll before the revision by sex, and so a rate for women and for men.

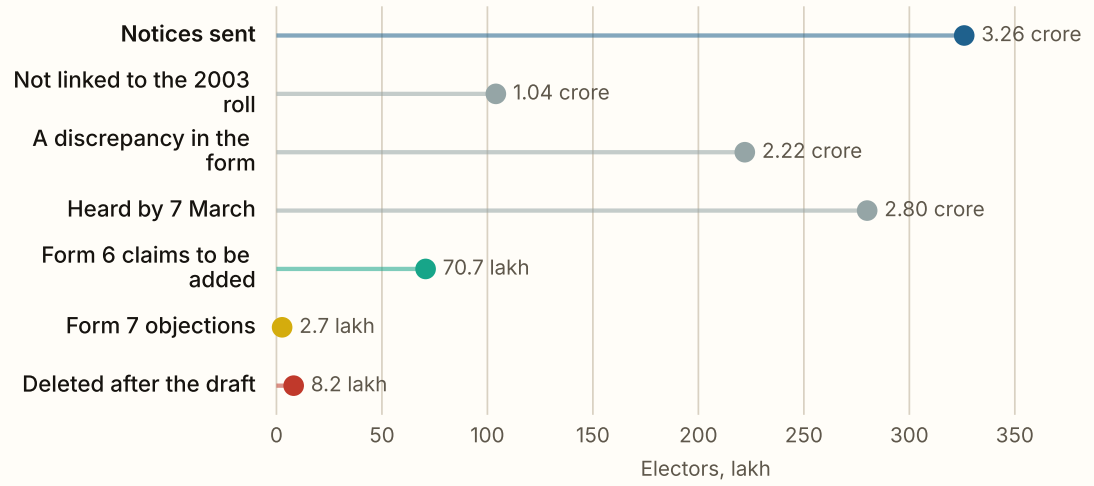

> **Women were 53.6% of the names left off and 46.8% of the roll before the revision.** For every 100 women on the roll, 21.5 were left off the draft, against 16.3 for every 100 men. The roll had 877 women for every 1,000 men in 2025, the draft 824 and the final roll 834. Women were 49.8% of the rise from the draft to the final roll, 50.5% of the 70.7 lakh Form 6 claims, and 41.2% of the electors whose deletion was sought in the 2.7 lakh Form 7 objections.

The Chief Electoral Officer said 42.1 lakh women over 25 still registered at their father's address were left off, and 29.4 lakh were kept. He gave this as the main reason more women than men were left off, because a woman registered at her parents' home and again at her husband's appears twice. That one group is 16.7 lakh larger than every name in the state entered as already enrolled elsewhere, 25.5 lakh, so most of these women were entered under another reason, such as permanently shifted. The lists do not say whether each of them was on the roll a second time.

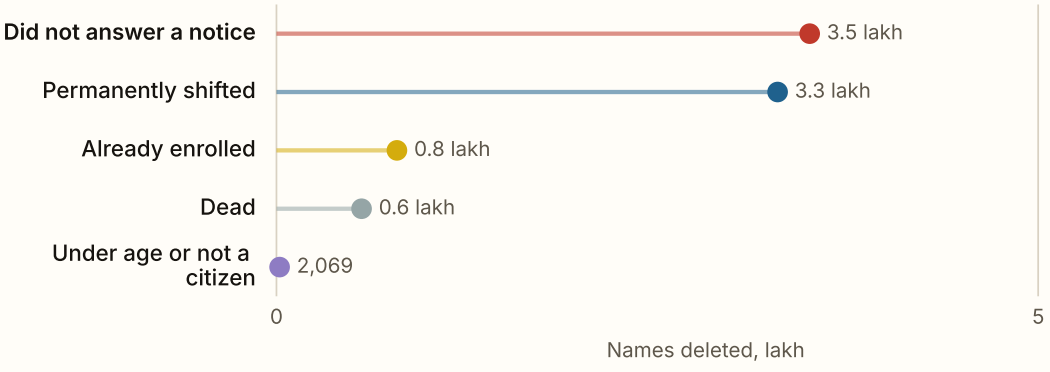

The split by sex and the figures on women registered at their father's address are the Chief Electoral Officer's, given to the Hindustan Times (18 January 2026) in lakh and crore. The two parts he gave of the 71.18 lakh women checked add to 71.55 lakh. The draft and final rolls by sex are the CEO's own exact figures.

After the draft

Electors kept on the draft roll were sent a notice when their form could not be linked to the roll of 2003 or when the Commission's software found a discrepancy in it, and were heard by an assistant registration officer. Names were then added on Form 6 claims and deleted on Form 7 objections and after the hearings. Every figure here is the Chief Electoral Officer's, as the press reported it.

Notices went to 3.26 crore electors kept on the draft, 26.0 of every 100 on it. 1.04 crore could not be linked to the roll of 2003 and 2.22 crore had a discrepancy the Commission's software found in their form, such as a name or a parent's name that did not match. They were heard by 8,751 assistant registration officers under 493 registration officers, about 3,725 notices for each assistant officer, or about 56 for each of them every day from 21 January to 27 March. The Hindu reported the two groups as 1.4 crore and 2.02 crore, which add to more than the 3.26 crore total, so the split the Hindustan Times reported, which adds up, is used here.

3.5 lakh of the 8.2 lakh names deleted after the draft were deleted because the elector did not answer a notice. That is 1.1 of every 100 electors sent one. 2,069 were deleted as under age or not citizens. The reasons are the Chief Electoral Officer's, as The New Indian Express reported them, and the CEO did not say how many came through notices and how many through Form 7.

Disputes and help in Uttar Pradesh

> 37 court cases, Form 7 complaints, protests and reported deaths in Uttar Pradesh are listed with their sources on Protests and disputes. 4 organisations that helped electors in Uttar Pradesh are on Left off the roll? What to do, with what the law lets an elector do.

Every district

Tap or click a column name to sort by it. On a phone each row is a card.

DISTRICT	ROLL OCT 2025	DRAFT ROLL	LEFT OFF	PER 100 ▾	SHIFTED %	UNTRACEABLE OR ABSENT %	DEA %
Lucknow	39,94,535	27,94,397	12,00,138	30.0	44.6	35.6	10.
Ghaziabad	28,37,991	20,19,852	8,18,139	28.8	44.0	39.1	7.8
Balrampur	15,83,027	11,71,827	4,11,200	26.0	32.4	38.8	15.
Kanpur Nagar	35,38,261	26,36,113	9,02,148	25.5	43.4	34.4	11.
Meerut	26,99,820	20,34,185	6,65,635	24.7	47.0	27.2	13.
Prayagraj	46,92,860	35,36,555	11,56,305	24.6	42.3	31.8	15.
Gautam Buddha Nagar	18,65,673	14,18,202	4,47,471	24.0	49.2	31.7	8.4
Agra	36,00,071	27,63,128	8,36,943	23.2	40.2	35.4	12.
Hapur	11,56,699	8,98,796	2,57,903	22.3	47.1	21.9	13.
Shahjahanpur	23,15,538	18,11,616	5,03,922	21.8	38.7	31.1	19.
Kannauj	12,89,220	10,11,125	2,78,095	21.6	42.6	35.2	13.

The figures are by district only, from the Chief Electoral Officer's table as published in the press. The split by sex, by urban and rural area and the notices are the Chief Electoral Officer's figures as the press reported them, rounded to the lakh.

Questions about this page

How many names were left off the draft in Uttar Pradesh?

Uttar Pradesh's draft roll left off 2.89 crore names, 18.7 of every 100 electors on the roll of 27 October 2025. The draft roll is the list published once the enumeration forms were collected, and a name whose form did not come back was left off it. 44.9% were entered as permanently shifted, 27.5% as untraceable or absent, 16.0% as dead and 8.8% as already enrolled elsewhere. A reason is what the officer wrote down, and nobody checked it.

Where were the most names left off?

Lucknow left off 30.0 of every 100 electors, the most of the 75 districts, and 17 districts left off 20 or more. Lalitpur left off the fewest, 10.0. The cities lost the most. Lucknow, Ghaziabad, Kanpur Nagar and Meerut are four of the five districts that left off the most per 100 electors.

Were the names put back?

The final roll of 10 April 2026 was 84.3 lakh larger than the draft, 29.2% of what the draft left off. That rise is the names added, new voters among them, less the names deleted. The final roll is the draft after the names added and deleted on claims and objections. A further 8.2 lakh were deleted after the draft, according to the press.

Were more women than men left off?

Women were 53.6% of the names left off and 46.8% of the roll before the revision. 21.5 of every 100 women on the roll were left off, against 16.3 of every 100 men, by the Chief Electoral Officer's rounded figures. The Chief Electoral Officer said 42.1 lakh women over 25 still registered at their father's address were among those left off. After the draft, an elector asks to be added with Form 6, and an objection to a name already on the roll is made with Form 7. According to the press, women were 50.5% of the Form 6 claims and 41.2% of the electors whose deletion was sought through Form 7.

Did towns lose more names than villages?

Urban areas lost 28.1 of every 100 electors and rural areas 15.3, by the Chief Electoral Officer's figures as the press reported them. Urban areas held 26.9% of the roll and 40.5% of the names left off. The districts that lost the most also entered more of their names as untraceable or absent, the reason that rests on the least.

Could the names left off have changed election results?

No count by constituency was published. If each district's names left off are shared out over its seats by their electors, the share is larger than the 2022 winning margin in 377 of the 403 seats. This estimates how many seats the names left off could have decided. It cannot say which seats, or that any result changed. No figure by constituency has been published, so each district's count is spread over its seats by their 2022 electors. The spread gives how many seats, never which, and the people left off would not all have voted, nor all for one side.

What happened to the notices?

After the draft, notices went to 3.26 crore electors, 26.0 of every 100 on it, and 3.5 lakh were deleted for not answering one. 8,751 assistant registration officers heard them, about 3,725 notices each. In all 8.2 lakh names were deleted after the draft, as the press reported the Chief Electoral Officer's figures.

Why are there no constituency figures?

The Chief Electoral Officer, who keeps the state's rolls, published the revision by district. No table of it by assembly constituency, the area that elects one member of the assembly, could be found. The only other source below the district is the lists of individual electors, and no count is made from those lists. So the map and the tables stop at the district.

UTTAR PRADESH 2026

Figures as of 10 April 2026, when the final roll was published.

Method

1 Uttar Pradesh's draft roll left off 2.89 crore names, 18.7 of every 100 electors on the roll of 27 October 2025.

2 The district table is the Chief Electoral Officer's, as photographed and published by India TV, and every row adds up two ways.

What is counted

The district table

The draft roll is the list published once the enumeration forms were collected. The names left off it, district by district and by the reason entered, are from a table by the Chief Electoral Officer (CEO), who keeps the state's rolls, titled "Status of Electors in Draft Roll as on 06-01-2026". For each of the 75 districts it gives the roll of 27 October 2025, the draft roll and the names left off under five reasons, which are death, untraceable or absent, permanently shifted, already enrolled and others. The CEO's site cannot be reached from outside India, so the table is the CEO's as published in the press, in a photograph of it that India TV published on the same day. Its state row matches the CEO's press note of 6 January 2026.

How the table adds up

Every row adds up two ways. The roll before less the draft equals the names left off, and the five reasons add up to the same number. Every column also adds up to the table's own state row, which gives 15,44,30,092 on the roll before, 12,55,56,025 on the draft and 2,88,74,067 left off. All of these hold.

The rolls by sex and the final roll

The final roll is the draft after the names added and deleted on claims and objections. The draft and the final roll of 10 April 2026, by sex, are from the CEO's own post of 13 April 2026. The roll before the revision has not been published by sex. The names left off by sex, 1.55 crore women and 1.34 crore men, are the CEO's figures as he gave them to the Hindustan Times on 18 January 2026, rounded to the lakh. The roll before by sex is the draft by sex plus those figures, so the rates for women and men carry the same rounding.

Urban and rural

The same Hindustan Times report gives the CEO's rolls before the revision and at the draft for the urban and rural areas, 4.16 and 2.99 crore urban, 11.28 and 9.56 crore rural. The report prints the rural fall as 1.27 crore, which disagrees with its own two rolls and with the 15.23% it gives. The difference of the two rolls, 1.72 crore, matches both and is used. The comparison by district takes each district's urban share from the 2011 Census, as the Urban and rural page does.

The 2022 margins

No figure by assembly constituency has been published. Each district's names left off are spread over its constituencies in proportion to their electors in the 2022 Assembly election, from the Election Commission's statistical report, and each constituency's share is set against its 2022 winning margin. The constituencies are placed in districts as the 2022 results list them. A real count in one constituency can differ widely from its district's rate, so the spread gives how many seats could have been decided, never which, and never that a result changed. Spreading the state's total with no district split, as the All India margins page does, gives a slightly different count, and the page shows both.

The notices and the hearings

The 3.26 crore notices, the 1.04 crore electors not linked to the 2003 roll, the 2.22 crore with a discrepancy, and the 493 registration officers and 8,751 assistant registration officers who heard them are the CEO's figures in the Hindustan Times report of 18 January 2026. The Hindu (7 March 2026) gave the two groups as 1.4 and 2.02 crore, which add to more than the total, and is not used for the split. Notices per officer are the notices divided by the assistant officers, and per day by the 66 days from 21

January to 27 March 2026. They are averages. The lists do not say how long any hearing took.

District circumstances

The rank correlations are the same as those on the District factors and Urban and rural pages. A correlation is clear of chance when it is larger than 1.96 divided by the square root of one less than the number of districts.

What is from the press

The 8,15,996 deleted after the draft are from The New Indian Express, quoting the CEO. After the draft, an elector asks to be added with Form 6, and an objection to a name already on the roll is made with Form 7. The Form 6 and Form 7 counts are from The Hindu, quoting the CEO's press conference of 7 March 2026. For Form 7 the split by sex is of the electors whose deletion was sought.

Shifted, absent or other

The press note puts 2.17 crore (one crore is ten million) under shifted and absent. That figure is untraceable or absent, permanently shifted and others together. The All India pages fold the reasons the same way, into three groups that every state reported, the dead, the shifted, absent or other, and those enrolled more than once.

What these tables cannot show

- How many names were left off in each assembly constituency, the area that elects one member of the state assembly. No such table could be found.
- The names left off by sex below the state, or by age at any level. The state split by sex is rounded to the lakh.
- How many of those left off were put back, or the final roll by district.
- Whether each exclusion or deletion was right, or how anyone missing from the roll would have voted.

Downloads

The district table, the constituency spread against the 2022 margins and the state figures with their sources are at the foot of this page and on the Downloads page.

Analysis of the named lists

Only counts are published, never a name. For analysis that looks at named voters, see the Sabar Institute.

Questions about this page

Why are there no constituency figures?

The Chief Electoral Officer, who keeps the state's rolls, published the revision by district. No table of it by assembly constituency, the area that elects one member of the assembly, could be found. The only other source below the district is the lists of individual electors, and no count is made from those lists. So the map and the tables stop at the district.

Where do the figures come from?

The district table is the Chief Electoral Officer's handout of 6 January 2026, as photographed and published in the press by India TV. Every row of it adds up two ways. The rolls by sex are from the Chief Electoral Officer's own posts. The forms and the later deletions are from press reports quoting the Chief Electoral Officer. The method page has every link.
